since 1996

LIGHTING SOLUTIONS 2020

IT ALL STARTS WITH LIGHT

Three different quotations were received for a stunning bar. An interior designer stuck to a drawing table, finally realized the perfect colour to put on the walls. Endless discussions were held about the right chairs. The interior of a store, restaurant or hotel has to be on point. The design of the establishment determines atmosphere and appearance. It is part of your brand. But what to do with the lighting? How do you incorporate this into your design, to contribute to perception and atmosphere? Have you ever really thought about this?

At Internova, we plan and design professional LED lighting. Our main focus is in the retail and hospitality industry. As producers of light, we are proud of our broad selection of lighting products. We advise a lighting strategy based on LED modules, lumens, lighting colour and focal points. All our fixtures are made in The Netherlands. During the past 24 years, we have been part of many big hospitality and retail projects. Projects in collaboration with wholesalers and lighting specialists.

Our functional lighting is not only easy on the eye, but is designed with a purpose. Lighting not only has to contribute to the atmosphere, but it is also a part of the branding, routing and conversions. It takes more than just a set of lights and track to make it work. Lighting is a specialty, which makes it a real profession. And therefore; Internova: professional lighting.

LIGHTING DEFINITIONS

LUMEN

Light output
Output of luminous flux.

CRI Ra

Colour rendering index

The higher the CRI (on a scale 0 - 100), the more natural the colours appear. Natural outdoor light has a CRI of 100Ra.

CCT

Correlated Colour Temperature

CCT is defined in degrees Kelvin (K). 3000K warm light, 4000K neutral white.

UGR

Unified Glare Rating

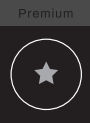

The Unified Glare Rating (UGR) is an international index that quantifies discomfort glare. The lower the value, the less discomfort users will experience.

* Courtesy of Koninklijke Philips NV

LED MODULES:

Basic lighting module available in CRI >80Ra and >90Ra in 2700K, 3000K, 4000K, and 5700K

Excellent quality of light and colour rendition, combined with high energy efficiency. Ideal for creating ambience, fresh whites and depth of colour in many retail environments. Premium White module available in CRI >80Ra and >90Ra in 3000K and 4000K. Premium Ambiance module available in CRI >90Ra in 2200K.

LED modules dedicated towards fresh food applications. Food WarmWhite Module: Enhances the appearance of fresh food, such as bread, fruit and vegetables. Food Premium Meat Module: Enhances the appearance of fresh meat. Fresh Fish Module: Enhances the appearance of fresh fish.

Dim-to-Warm is a technology that reduces a luminaire's colour temperature when being (phase) dimmed, from 3000K to 2200K. This makes our Dim-to-Warm fixtures ideal to use in domestic and hospitality projects.

Tunable White allows you to control the colour temperature of a fixture between 2500K and 7000K. Our Tunable White fixtures can be controlled using the user friendly Casambi app.

Casambi is a bluetooth low energy lighting solution. A large number of our fixtures
can be equipped with the Casambi option. All Casambi products automatically form
a wireless mesh network. It can be controlled by smartphones, tablets or smart
watches. The Casambi App can be
downloaded for free in the App store. With Casambi you can:

- Dim the lighting*
- Group luminaires and control them together
- Configure, save and recall scenes
- Adjust light colours*
- Adjust colour temperatures*
- Take pictures and add lighting control directly to your picture
- Defining timers for the purpose of Human Centric Lighting*

* Fixtures have to be equipped with this feature
